

CD31/PECAM-1 clone MX032

Instructions for Use

Specification:

CD31 is a transmembrane glycoprotein, 130-140 kDa, also designated platelet-endothelium cell adhesion molecule = PECAM-1, belonging to the immunoglobulin super family. CD31 is ligand for CD38 and plays a role in thrombosis and angiogenesis. CD31 is strongly expressed in endothelial cells and weakly expressed in megakaryocytes, platelets, occasional plasma cells, lymphocytes (esp. marginal zone B-cells, peripheral T-cells) and neutrophils.

Availability:

Catalog No.	Contents	Volume
ILM7200-C01	CD 31	0,1 ml concentrate
ILM7200-C05	CD 31	0,5 ml concentrate
ILM7200-C1	CD 31	1,0 ml concentrate

Intended use: For Research Use Only

Reactivity: Human

Human Gene Symbol: PECAM1

Synonyms: CD31

Human Entrez Gene ID: 5175

Clone: MX032

Species of origin: Mouse

Isotype: IgG

Control Tissue: Tonsil

Staining: Membranous

Presentation: Tissue culture supernatant containing 15mM sodium azide.

Application and suggested dilutions:

Pre-treatment: Heat induced epitope retrieval in 10 mM citrate buffer, pH6.0 for 20 minutes is required for IHC staining on formalin-fixed, paraffin embedded tissue sections.

- Immunohistochemical staining of formalin-fixed, paraffin embedded tissue section (dilution 1:200 - 1:400)

The optimal dilution for a specific application should be determined by the investigator.

Note: Dilution of the antibody in 10% normal goat serum followed by a goat anti-mouse secondary antibody-based detection is recommended.

Storage & Stability: Store at 2-8 °C. Do not use after expiration date printed on the vial.
